Art Unit: 2816

1. The disclosure is objected to because of the following informalities: on page 2, line 5, --a--should be inserted after "with". On page 3, lines 7 and 10, "affect(s)" should be changed to --effect(s)--.

Appropriate correction is required.

2. The drawings are objected to because the CM line in Fig. 1 connected to the backgates of mn3 and mn4 should be shown as being directly connected to the other CM line in Fig. 1 (i.e., the line connected to the common sources of mn1 and mn2).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the

Art Unit: 2816

filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Claims 1-12 are allowed.

No prior art has been found showing a MOS varactor with both (a) drain and source connected to each other, (b) the backgate thereof being connected to a common node voltage and (c) the drain/source is electrically separate from the backgate.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Note especially Staszewski et al, which appears to show a common mode output (the output of the inverter M4,M3 tied to the back gate of M1 and M2, but does not show the drain/source being electrically separate from the backgate).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth B. Wells whose telephone number is (571)272-1757. The examiner
